0. Purpose of this guidebook

This guidebook is to assist third party providers (TPP) in using COMSUIE API Service provided by MUFG Bank (hereinafter, referred to as "MUFG"). This guidebook provides a broad explanation on how to use COMSUIE API Service, such as a COMSUIE API Service outline, procedures to use COMSUIE API Service, and termination of using COMSUIE API Service.

1. About COMSUIE API Service

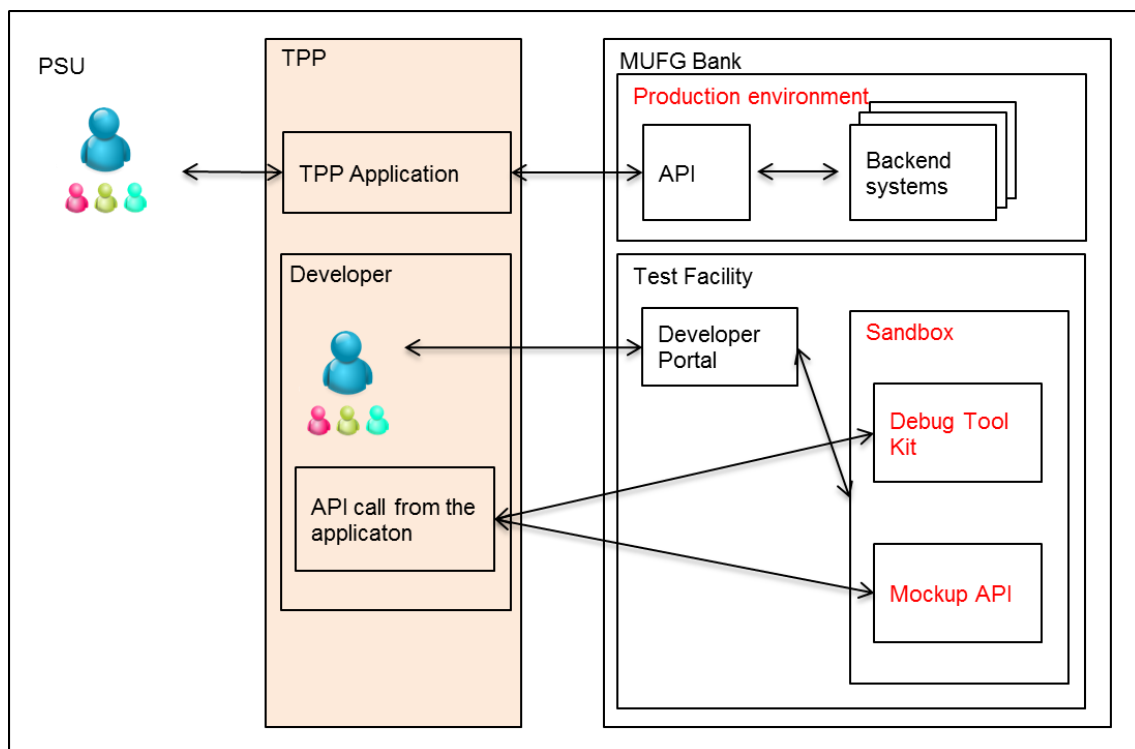

COMSUIE API Service is available to customers using MUFG Global CMS (*1) (GCMS Plus).

(*1) Cash Management Service

1.1 Conceptual diagram

COMSUIE API Service has following two environments;

- Production environment
- Test Facility

1.1.1 Production environment

This environment offers MUFG's production COMSUIE API Services. It connects to MUFG's internal systems, such as customer authentication system and backend systems.

1.1.2 Test Facility

This environment offers set of functions to test MUFG's API. It consists of following components;

➤ COMSUITE API Portal

Website to view the reference of MUFG's APIs. You can create accounts and obtain API keys to use the "Mockup API" and "Debug Tool Kit" below.

➤ Mockup API

Mockup environment to check behaviors of MUFG's APIs.

This is not connected to the production environments, and returns mockup-specific dummy data.

➤ Debug Tool Kit

<Error Registration Tool>

This tool is used to simulate error responses that cannot be generated by executing the above Mockup API.

1.2 API Standard

MUFG's API follows the standard defined by Berlin Group (*1) which is found in the public document "NextGenPSD2 Access to Account Interoperability Framework - Implementation Guidelines" (*2).

(*1) Berlin Group : <https://www.berlin-group.org/nextgenpsd2-downloads>

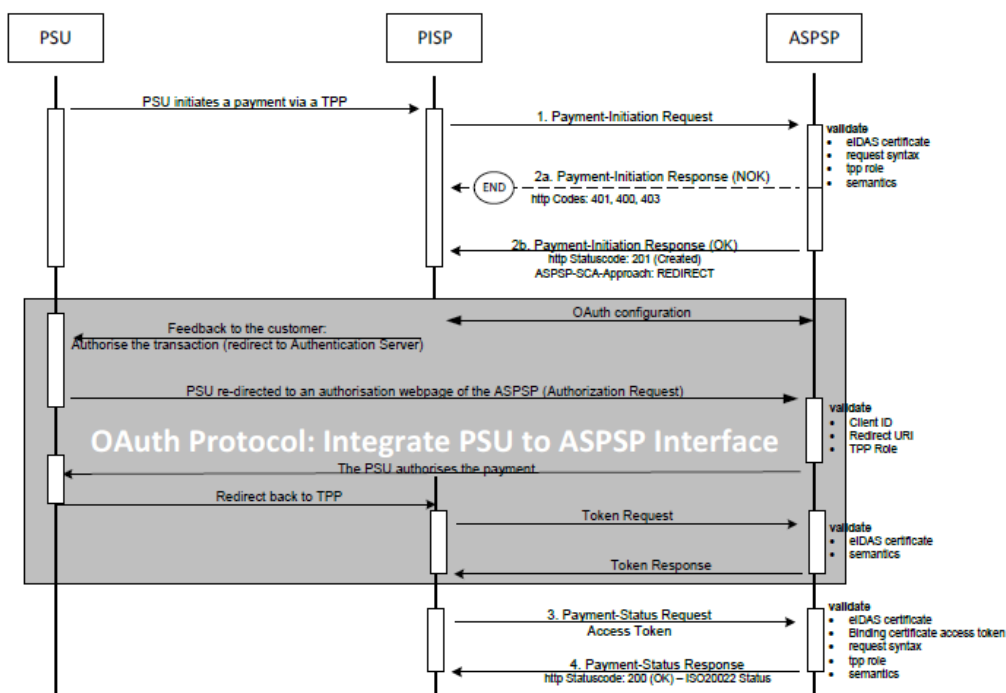

(*2) Version 1.3 as of 2019/03/14

1.3 Outline of COMSUITE API Service authentication and API call

MUFG API supports OAuth2 SCA Approach.

Payment Initiation Service (PIS):

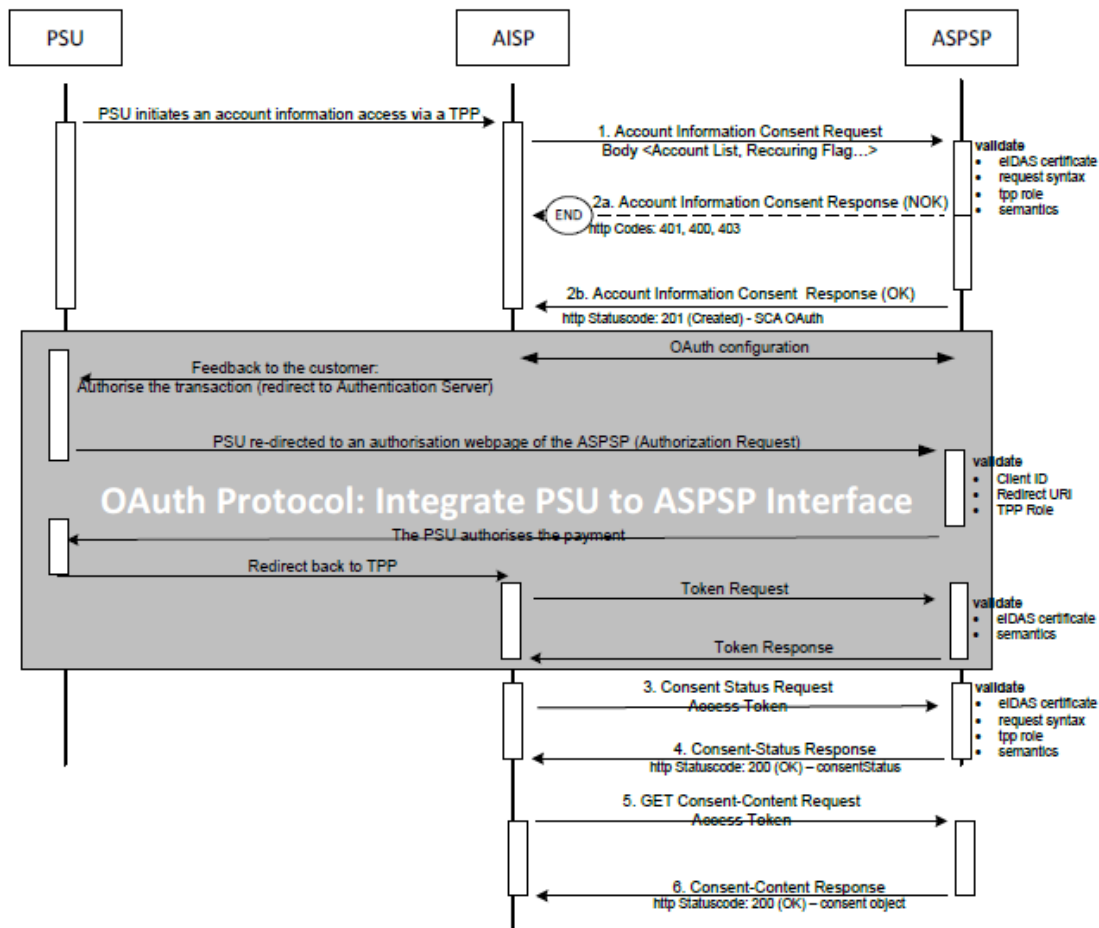

The payment initiation flow with OAuth2 SCA Approach can be shown as below;

Source: NextGenPSD2 Access to Account Interoperability Framework - Implementation Guidelines V1.3_20181019.pdf, Page48, <https://www.berlin-group.org/nextgenpsd2-downloads>

Account Information Service (AIS):

The Account information consent flow with OAuth2 SCA Approach can be shown as below;

Source: NextGenPSD2 Access to Account Interoperability Framework - Implementation Guidelines V1.3_20181019.pdf, Page102, <https://www.berlin-group.org/nextgenpsd2-downloads>

1.4 List of APIs provided

MUFG's APIs are as follows.

Payment Initiation Service (PIS)

API Name	Endpoints	Method	Description
payments1	payments/{payment-product}	POST	Creation of Single Payment: Enables acceptance of single payments.
bulk-payments1	bulk-payments/{payment-product}	POST	Creation of Bulk Payment: Enables acceptance of bulk

			payments.
payments2	payments/{payment-product}/{paymentId}/status	GET	Inquiry of Applied Single Payment: Returns status of acceptance of single payments.
bulk-payments2	bulk-payments/{payment-product}/{paymentId}/status	GET	Inquiry of Applied Bulk Payment: Returns status of acceptance for bulk payments.
authorization s2	authorize	GET	Issues authorization code (PIS service).
	token	POST	Issues access token (PIS service).

Account Information Service (AIS)

API Name	Endpoints	Method	Description
consents1	consents	POST	Creation of Consent: Creates end user's consent resource.
consents2	consents/{consentId}	GET	Inquiry of Consent Information: Returns consent details.
		DELETE	Deletion of Consent: Deletes a consent.
accounts	accounts	GET	Inquiry of Account Information: Returns a list of accounts for which consent has been obtained.
	accounts/{account-id}/balances	GET	Inquiry of Account Balance: Returns balance information for a designated account.
	accounts/{account-id}/transactions	GET	Inquiry of Transaction History: Returns transaction details for a designated account.
authorization s1	authorize	GET	Issues an authorization code (AIS service).
	token	POST	Issues an access token (AIS service).

Fund Confirmation Service (FCS)

API Name	Endpoints	Method	Description
funds-confirmations1	/consents/confirmation-of-funds	POST	Creation of Consent: Creates end user's consent resource.

funds-confirmations2	/consents/confirmation-of-funds/{consentId}	GET	Inquiry of Consent Information(FCS): Returns consent details(FCS service).
		DELETE	Deletion of Consent(FCS): Deletes a consent(FCS service).
	funds-confirmations	POST	Checks whether a specific amount is available on a designated account.
Authorizations3	authorize	GET	Issues an authorization code (FCS service).
	token	POST	Issues an access token (FCS service).

1.5 API I/F definition

1.5.1 Creation of a Single Payment

➤ URI

POST <https://api.bk.mufig.jp/div1/corporation/v1/payments/{payment-product}>

➤ Summary

Creates single payment from an account registered under GCMS Plus.

➤ Description

(1) Approval of “Applied” payments via API

Submitted payments via API become “Applied” status, which is a status waiting for approval.

For approval, GCMS Plus customers (approver) have to log into GCMS Plus and perform approval.

(2) Settlement account

Settlement account must be registered under GCMS Plus.

Only one settlement account can be set in a call, and multiple settlement accounts cannot be set.

(3) Available payment service

Following payment services are available in GCMS Plus and API.

GCMS Plus Payment Menu	Available payment service via API
Payments and Transfers (Domestic (Single), Domestic (Single) - Target2, Book Transfer)	"domestic-payments", "target-2-payments"
Payments and Transfers (Domestic - SEPA, Domestic (Confidential) -	"sepa-credit-transfers"

SEPA)	
UK Low Value Payment	"uk-low-value-payments"
Payments and Transfers (Foreign Remittance)	"cross-border-credit-transfers"
Payments and Transfers (Domestic (Single) - Target2 (ISO20022), Domestic (Single) - CHAPS / Target2 (ISO20022), Book Transfer (ISO20022))	"target-2-payments-iso20022", "domestic-payments-iso20022"
Payments and Transfers (Foreign Remittance (ISO20022))	"cross-border-credit-transfers-iso20022"

(4) Return of business validation errors

Errors that occurred by various business validations in this API are returned when a separate API "Inquiry of Applied Single Payment" is executed.

See the list of error codes for details of information to be returned.

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
payment-product	String	M	Not allowed	Fixed as the following eight values: "domestic-payments" "target-2-payments" "sepa-credit-transfers" "uk-low-value-payments" "cross-border-credit-transfers" " "target-2-payments-iso20022" " "domestic-payments-iso20022" " "cross-border-credit-transfers-iso20022"

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
Content-Type	String	M	Not allowed	Fixed as "application/json"
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the

				<p>initiating party.</p> <p>This is the unique ID of TPP for the payment initiation regarding PSD2 article 46b, 47 and EBA RTS article 29.</p>
PSU-IP-Address	String	M	Not allowed	<p>The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP.</p> <p>If not available, the TPP shall use the IP Address used by the TPP when submitting this request.</p>
PSU-IP-Port	String	M	Not allowed	<p>The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.</p>
PSU-Accept	String	M	Not allowed	<p>The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.</p>
PSU-Accept-Charset	String	M	Not allowed	<p>Character set that can be used</p>
PSU-Accept-Encoding	String	M	Not allowed	<p>Encoding format that can be used</p>
PSU-Accept-Language	String	M	Not allowed	<p>Language code that can be used</p>
PSU-User-Agent	String	M	Not allowed	<p>The forwarded Agent header field of the HTTP request between PSU and TPP, if available.</p>
PSU-Http-Method	String	M	Not allowed	<p>HTTP method used at the PSU – TPP interface, if available.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • GET

				<ul style="list-style-type: none"> • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	<p>UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available.</p> <p>UUID identifies either a device or a device dependant application installation. In case of an installation identification this ID need to be unaltered until removal from device.</p>
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Request Body

In case of "sepa-credit-transfers"

M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
requestedExecutionDate	String	10-10	O	(*1)	Requested payment execution date Format is "yyyy-mm-dd"
purposeCode	String	4-4	O	(*1)	Purpose code
debtorAccount			M	Not	Settlement account

					allowed	
	iban	String	1-34	M	Not allowed	Settlement account number Set the account number registered for SCT.
	currency	String	3-3	O	(*1)	Currency code
instructedAmount				M	Not allowed	Payment amount
	currency	String	3-3	M	Not allowed	Currency code Error if other than "EUR"
	amount	String	1-12	M	Not allowed	Amount Commas not allowed
endToEndIdentification		String	1-35	O	(*1)	Customer reference number
creditorName		String	1-70	M	Not allowed	Beneficiary name
creditorAccount				M	Not allowed	Receiving account number
	iban	String	1-34	M	Not allowed	IBAN
ultimateCreditor		String	1-70	O	(*1)	Final beneficiary
creditorAgent		String	1-11	O	(*1)	Beneficiary bank BICFI
remittanceInformationUnstructured		String	1-140	O	(*1)	Unstructured payment information
remittanceInformationStructured		String	1-25	O	(*1)	Structured payment information
regulatoryReporting		String	1-35	O	(*1)	Regulatory report

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

In case of "uk-low-value-payments"

M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
requestedExecutionDate	String	10-10	M	Not allowed	Requested execution date "yyyy-mm-dd"
debtorAccount			M	Not	Settlement account

					allowed	number
	iban	String	1-34	M	Not allowed	Settlement account number Set the account number registered for UKLVP.
	currency	String	3-3	O	(*1)	Currency code "GBP"
profileName		String	1-20	M	Not allowed	Profile name
instructedAmount				M	Not allowed	Payment amount
	currency	String	3-3	M	Not allowed	Currency code "GBP"
	amount	String	1-12	M	Not allowed	Amount
creditorName		String	1-18	M	Not allowed	Beneficiary name
creditorAgentClearingSystemMemberId		String	6-6	M	Not allowed	Clearing system member ID of the beneficiary organization "nnnnnn" format
creditorAccount		String	8-8	M	Not allowed	Receiving account number
remittanceInformationUnstructured		String	1-18	O	(*1)	Unstructured payment information

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

In case of "domestic-payments" / "target-2-payments" / "cross-border-credit-transfers" M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
requestedExecutionDate	String	10-10	O	(*1)	Requested execution date Format is "yyyy-mm-dd"
paymentType	String	1-1	M	Not allowed	Payment type Set one of the

					following values: "1": Book Transfer "2": Domestic Remittance "3": Foreign Remittance
serviceLevel	String	1-1	O	(*1)	Service level
instructedAmount			M	Not allowed	Payment amount
currency	String	3-3	M	Not allowed	Currency Code
amount	String	1-19	M	Not allowed	
rateType	String	4-4	M	Not allowed	Rate type Set one of the following values: "NOEX" "SPOT" "CONT"
contractId	String	1-15	C	(*1)	Reservation ID Mandatory when rateType is "CONT". Settings other than the above are not allowed.
purpose	String	1-22	O	(*1)	Purpose
endToEndIdentification	String	1-16	O	(*1)	Customer reference number
creditorAccount			M	(*1)	Receiving account number
iban	String	1-34	C	(*1)	Cannot be set when bban is set.
bban	String	1-34	C	(*1)	Cannot be set when iban is set.
creditorName	String	1-70	M	Not allowed	Beneficiary name
creditorAddress1	String	1-70	O	(*1)	Beneficiary address 1
creditorAddress2	String	2-2	O	(*1)	Beneficiary address 2
creditorAgentOption	String	1-1	M	Not allowed	Beneficiary organization option

					Set one of the following: "A" "C" "D"
creditorAgentName	String	1-35	C		Beneficiary organization name Required when "D" is selected for creditorAgentOption, or when creditorAgentBranchNameAddress or creditorAgentcountry is set.
creditorAgentBranchNameAddress	String	1-70	O	(*1)	Beneficiary organization branch name / address / city Can be set when "D" is selected for creditorAgentOption.
creditorAgentCountry	String	2-2	C	(*1)	Beneficiary organization country Can be set when "D" is selected for creditorAgentOption. Mandatory when paymentType is "3".
creditorAgentBIC	String	1-11	C	(*1)	Beneficiary organization BIC Required when "A" is selected for creditorAgentOption.
creditorAgentNationalClearingCode	String	1-33	C	(*1)	Local clearing organization code of the beneficiary organization Required when "C" is selected for

						creditorAgentOption.
debtorAccount			M	Not allowed		Settlement account number
	bban	String	1-34	M	Not allowed	Settlement account number Set the account number registered for Payments. Required when "C" is selected for creditorAgentOption.
	currency	String	3-3	O	(*1)	Error if not a currency linked to a G+ account
chargeBearer		String	3-3	M	Not allowed	Charge type
chargeAccount					(*1)	Charge account number
	bban	String	1-34	O	(*1)	
remittanceInformationUnstructured		String	1-140	O	(*1)	Unstructured payment information
regulatoryReporting		String	1-105	O	(*1)	Regulatory report

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

In case of "domestic-payments -iso20022" / "target-2-payments -iso20022" /

"cross-border-credit-transfers -iso20022"

M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
requestedExecutionDate	String	10-10	O	(*1)	Requested execution date Format is "yyyy-mm-dd"
requestedExecutionTime	String	19-29	O	(*1)	Requested execution time Format is "yyyy-mm-ddThh:mm:ss.SSS[Z](+ -)hh:mm]"

paymentType	String	1-1	M	Not allowed	Payment type Set one of the following values: "1": Book Transfer "2": Domestic Remittance "3": Foreign Remittance
instructedAmount			M	Not allowed	Payment amount
	currency	String	3-3	M	Not allowed Currency Code
	amount	String	1-19	M	Not allowed amount
exchangeRateInformation	String	4-4	M	Not allowed	Rate type Set one of the following values: "SPOT" "AGRD" "NOEX"
contractId	String	1-35	C	(*1)	Reservation ID Mandatory when rateType is "AGRD". Settings other than the above are not allowed.
purpose	String	1-35	O	(*1)	Purpose
endToEndIdentification	String	1-35	O	(*1)	Customer reference number
instructionIdentification	String	1-35	O	(*1)	Instruction identification
serviceLevel	String	4-4	O	(*1)	Set one of the following values: "URGP" "NURG"
chargeBearer	String	4-4	M	Not allowed	Charge type Set one of the following values: "SHAR" "CRED" "DEBT"
debtorName	String	1-140	O	(*1)	Requester name

debtorAccount				M	Not allowed	Settlement account number
	bban	String	1-34	M	Not allowed	Cannot be set when iban is set.
	iban	String	1-34	C	(*1)	Cannot be set when bban is set.
	currency	String	3-3	O	(*1)	Mandatory when iban is set. Error if not a currency linked to a G+ account
debtorId		String	1-35	O	(*1)	Requester identification
creditorAccount				M	(*1)	Receiving account number
	bban	String	1-34	C	(*1)	Cannot be set when iban is set.
	iban	String	1-34	C	(*1)	Cannot be set when bban is set.
creditorAgentBIC		String	1-11	C	(*1)	Any of Beneficiary organization BIC, CreditorAgentBIC, or creditorAgentName is required when paymentType is “1” or “3”. Any of creditorAgentBIC, creditorAgentName, or creditorAgentNationalClearingCode is required when paymentType is "2".
creditorAgentAddress		-	-	-	-	Beneficiary organization address
	streetName	String	1-70	O	(*1)	Street name
	buildingNumber	String	1-16	O	(*1)	Building number
	townName	String	1-35	O	(*1)	Town name Mandatory when paymentType is “2” or “3” and either creditorAgentName or

						any items under creditorAgentAddress are set.
	postCode	String	1-16	O	(*1)	Post code
	country	String	2-2	O	(*1)	Country code Mandatory when paymentType is "2" or "3" and any of creditorAgentName or any items under creditorAgentAddress are set.
creditorAgentName		String	1-140	C	(*1)	Beneficiary organization name Either creditorAgentName or creditorAgentBIC is required when paymentType is "1" or "3" Any of creditorAgentName, creditorAgentBIC or creditorAgentNationalClearingCode is required when paymentType is "2". Mandatory when paymentType is "2" or "3" and any items under creditorAgentAddress are set.
creditorAgentNationalClearingCode		String	1-35	C	(*1)	Beneficiary organization national clearing code Any of creditorAgentNationalClearingCode, creditorAgentBIC, or creditorAgentName is

					required when paymentType is "2".
creditorName	String	1-140	M	Not allowed	Beneficiary Name
creditorId	String	1-35	O	(*1)	Beneficiary identification
creditorAddress	-	-	-	-	Beneficiary address
streetName	String	1-70	O	(*1)	Street name
buildingNumber	String	1-16	O	(*1)	Building number
townName	String	1-35	O	(*1)	Town name
postCode	String	1-16	O	(*1)	Post code
country	String	2-2	O	(*1)	Country code
ultimateDebtor	String	1-140	O	(*1)	Ultimate debtor Mandatory when any items under ultimateDebtorAddress are set.
ultimateDebtorAddress	-	-	-	-	Ultimate debtor address
streetName	String	1-70	O	(*1)	Street name
townName	String	1-35	O	(*1)	Town name Mandatory when ultimateDebtor or any items under ultimateDebtorAddress are set.
postCode	String	1-16	O	(*1)	Post code
country	String	2-2	O	(*1)	Country code Mandatory when ultimateDebtor or any items under ultimateDebtorAddress are set.
ultimateCreditor	String	1-140	O	(*1)	Ultimate beneficiary Mandatory when any items under ultimateCreditor are set.
ultimateCreditorAddress	-	-	-	-	Ultimate beneficiary address
streetName	String	1-70	O	(*1)	Street name
townName	String	1-35	O	(*1)	Town name

						Mandatory when ultimateCreditor or ultimateCreditorAddress is set.
	postCode	String	1-16	O	(*1)	Post code
	country	String	2-2	O	(*1)	Country code Mandatory when ultimateCreditor or any items under ultimateCreditorAddress is set.
remittanceInformationUnstructured		String	1-140	O	(*1)	Unstructured payment information
chargeAccount		-	-	-	-	Charge account number
	bban	String	1-34	O	(*1)	Cannot be set when iban is set.
	iban	String	1-34	O	(*1)	Cannot be set when bban is set.
	currency	String	3-3	O	(*1)	Mandatory when iban is set. Error if not a currency linked to a G+ account
regulatoryReportingInformationToDebtorAgent		String	1-350	O	(*1)	Regulatory reporting information to debtor agent
regulatoryReportingInformationToCreditorAgent1		String	1-35	O	(*1)	Regulatory reporting information to debtor agent 1
regulatoryReportingInformationToCreditorAgent2		String	1-35	O	(*1)	Regulatory reporting information to debtor agent 2
regulatoryReportingInformationToCreditorAgent3		String	1-35	O	(*1)	Regulatory reporting information to debtor agent 3
regulatoryReportingInformationToCreditorAgent4		String	1-35	O	(*1)	Regulatory reporting information to debtor agent 4
regulatoryReportingInformationToCreditorAgent5		String	1-35	O	(*1)	Regulatory reporting information to debtor

					agent) 5
regulatoryReportingInformationToCreditorAgent6	String	1-35	O	(*1)	Regulatory reporting information to debtor agent 6
regulatoryReportingInformationToCreditorAgent7	String	1-35	O	(*1)	Regulatory reporting information to debtor agent 7
regulatoryReportingInformationToCreditorAgent8	String	1-35	O	(*1)	Regulatory reporting information to debtor agent 8
regulatoryReportingInformationToCreditorAgent9	String	1-35	O	(*1)	Regulatory reporting information to debtor agent 9
regulatoryReportingInformationToCreditorAgent10	String	1-35	O	(*1)	Regulatory reporting information to debtor agent 10
instructionForDebtorAgent	String	1-140	O	(*1)	Instruction for debtor agent

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

Response Code (normal case)

The HTTP response code equals 201.

*See 1.5.17 "Response object (error case)" for response in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
Location	String	None	Location of the created resource (if created) "https://api.bk.mufg.jp/div1/corporation/v1/payments/"PIS"+yyymm+nnnnnnn" format
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
ASPSP-SCA-Approach	String	None	This data element must be

			<p>contained, if the SCA Approach is already fixed. Possible values are:</p> <ul style="list-style-type: none"> • EMBEDDED • DECOUPLED • REDIRECT <p>The OAuth SCA approach will be subsumed by REDIRECT.</p> <p>Fixed as "REDIRECT"</p>
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
paymentId	String	14-14	None	Resource identification of the generated payment initiation resource. PIS+"Yymm"+"NNNNNNNN"
transactionStatus	String	4-4	None	Status of payment. See Description in 1.5.2 for details. "RCVD"
transactionFeeIndicat or	Boolean	4-4	None	<p>If equals true, the transaction will involve specific transaction cost as shown by the ASPSP in their public price list or as agreed between ASPSP and PSU.</p> <p>If equals false, the transaction will not involve additional specific transaction costs to the PSU.</p> <p>If this data element is not used, there is no information about transaction fees unless the fee amount is given explicitly in the data element transactionFees.</p>

				MUFG only supports "True".
_links			None	<p>A list of hyperlinks to be recognised by the TPP. The actual hyperlinks used in the response depend on the dynamical decisions of the ASPSP when processing the request.</p> <p>Remark: All links can be relative or full links, to be decided by the ASPSP.</p> <p>Type of links admitted in this response, (further links might be added for ASPSP defined extensions):</p>
scaOauth	href		None	Link to the Issuance of Authorization Code API
	href	String	1-512	"https://e.ebusiness.bk.mufg.jp/pfa2/oo01/open_cert/authorize/"
status	href		None	Link to the Inquiry of Applied Single Payment API
	href	String	1-512	"https://api.bk.mufg.jp/div1/corporation/v1/payments/{payment-product}/{paymentId}/status"
token	href		None	Link to the Issuance of Access Token API

1.5.2 Creation of Bulk Payment

➤ URI

POST <https://api.bk.mufg.jp/div1/corporation/v1/bulk-payments/{payment-product}>

➤ Summary

Creates bulk payment from accounts registered under GCMS Plus.

➤ Description

(1) Approval of “Applied” payments via API

Submitted payments via API become “Applied” status, which is a status waiting for approval.

For approval, GCMS Plus customers (approver) have to log into GCMS Plus and perform approval.

(2) Settlement account

Settlement account must be registered under GCMS Plus.

(3) Available payment service

Following payment services are available in GCMS Plus and API.

GCMS Plus Payment Menu	Available payment service via API
Payments and Transfers (Domestic - SEPA, Domestic (Confidential) - SEPA)	"sepa-credit-transfers"
UK Low Value Payment	"uk-low-value-payments"

(4) Return of business errors

Errors that occurred by various business validations in this API are returned when a separate API “Inquiry of Applied Bulk Payment” is executed.

See the list of error codes for details of information to be returned.

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
payment-product	String	M	Not allowed	Fixed as the following three values: "sepa-credit-transfers" "uk-low-value-payments"

➤ Request Header

Same as Request Header in 1.5.1 "Creation of Single Payment".

➤ Request Body

In case of "sepa-credit-transfers"

M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
paymentInformationId	String	1-35	O	(*1)	
requestedExecutionDate	String	10-10	O	(*1)	Requested payment execution date Format is "yyyy-mm-dd"
purposeCode	String	4-4	O	(*1)	Purpose code
confidential	String	1-1	M	Not allowed	"1" or "0"
batchBookingPreferred	String	1-5	O	(*1)	Uniformly processed as "true" regardless of whether this field is set or not.
debtorAccount			M	Not allowed	Settlement account
iban	String	1-34	M	Not allowed	Settlement account number Set the account number registered for SCT.
currency	String	3-3	O	(*1)	Currency code
payments			M	Not allowed	Recurring field
instructedAmount			M	Not allowed	Payment amount
currency	String	3-3	M	Not allowed	Currency code Error if other than "EUR"
amount	String	1-12	M	Not	Amount

					allowed	Commas not allowed
endToEndIdentification	String	1-35	O	(*1)		Customer reference number
creditorName	String	1-70	M	Not allowed		Beneficiary name
creditorAccount			M	Not allowed		Receiving account number
iban	String	1-34	M	Not allowed		IBAN
ultimateCreditor	String	1-70	O	(*1)		Final beneficiary
creditorAgent	String	1-11	O	(*1)		Beneficiary organization BICFI
remittanceInformationUnstructured	String	1-140	O	(*1)		Unstructured payment information
remittanceInformationStructured	String	1-25	O	(*1)		Structured payment information
regulatoryReporting	String	1-35	O	(*1)		Regulatory report

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

In case of "uk-low-value-payments"

M: Mandatory, O: Optional, C: Conditional

Attribute	Type	Digit	Condition	Null value	Description
paymentInformationId	String	1-35	O	(*1)

[Response]

Same as the Response in 1.5.1 "Creation of Single Payment".

1.5.3 Inquiry of Applied Single Payment

➤ URI

GET <https://api.bk.mufg.jp/div1/corporation/v1/payments/{payment-product}/{paymentId}/status>

➤ Summary

Returns status of single payment that has been applied via API.

paymentId is used as the key to perform inquiry, which has been returned from API upon POST /Payment. This API's endpoint is set to the _links status href field in the response information of the Creation of Single Payment API. Please wait at least 5 seconds if you intend to execute this API immediately after the previous processing (=1.5.13 Issuance of Access Token) ends. Add the following Request Header information to the endpoint and execute it.

➤ Description

(1) Single payments that can be inquired about

Single payment to be inquired about must be performed via API.

Statuses are as follows.

Status	Description
ACSP	All preceding checks such as technical validation and customer profile were successful and therefore the payment initiation has

	<p>been accepted for execution.</p> <p>- The payment has been "Approved" by the final approver via GCMS Plus.</p>
RCVD	<p>Payment initiation has been received by the receiving agent.</p> <p>- The POST /Payment request has been received by GCMS Plus, and PaymentID has been generated.</p>
PDNG	<p>Payment initiation or individual transaction included in the payment initiation is pending. Further checks and status update will be performed.</p> <p>- POST /Payment has been executed, but PaymentID has not been generated yet.</p>
RJCT	<p>Payment initiation or individual transaction included in the payment initiation has been rejected.</p> <p>- The payment has been "Reject"ed via GCMS Plus.</p> <p>- The POST /Payment request has resulted in a business error.</p>

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
payment-product	String	M	Not allowed	<p>Fixed as the following eight values:</p> <p>"domestic-payments"</p> <p>"target-2-payments"</p> <p>"sepa-credit-transfers"</p> <p>"uk-low-value-payments"</p> <p>"cross-border-credit-transfers"</p> <p>"</p> <p>"target-2-payments-iso20022"</p> <p>"</p> <p>"domestic-payments-iso20022"</p> <p>"</p> <p>"cross-border-credit-transfers-iso20022"</p>
paymentId	String	M	Not allowed	<p>Resource Identification of the related payment.</p> <p>"PIS"+YYMM+NNNNNNNN format</p>

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
-----------	------	-----------	------------	-------------

X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based authentication was performed in a pre-step or an OAuth2 based SCA was performed in the current PIS transaction or in a preceding AIS service in the same session, if no such OAuth2 SCA approach was chosen in the current PIS transaction. Access token obtained in advance
Accept	String	M	Not allowed	The TPP can indicate the formats of status reports supported together with a prioritization following the HTTP header definition. The formats supported by this specification are <ul style="list-style-type: none"> • xml • JSON If only one format is supported by the TPP, which is not supported by the ASPSP this can lead to a rejection of the request. Fixed as "application/json" by MUFG
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this

				request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant application installation. In case of an installation identification this ID need to

				be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for response in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
transactionStatus	String	4-4	None	The following statuses are returned based on approval status, etc. PDNG: Payment application

				executed RJCT: Business error for payment application RJCT: Payment application rejected ACSP: Final approval given
--	--	--	--	--

1.5.4 Inquiry of Applied Bulk Payment

➤ URI

GET <https://api.bk.mufg.jp/div1/corporation/v1/bulk-payments/{payment-product}/{paymentId}/status>

➤ Summary

Returns status of bulk payments that has been applied via API.

paymentId is used as the key to perform inquiry, which has been returned from API upon POST /Payment. This API's endpoint is set to the _links status href field in the response information of the Creation of Bulk Payment API. Please wait at least 5 seconds if you intend to execute this API immediately after the previous processing (=1.5.13 Issuance of Access Token) ends. Add the following Request Header information to the endpoint and execute it.

➤ Description

(1) Bulk payments that can be inquired about

Bulk payments to be inquired about must be performed via API.

Statuses are the same as listed in 1.5.3 "Inquiry of Applied Single Payment".

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
payment-product	String	M	Not allowed	Fixed as the following three values: "sepa-credit-transfers" "uk-low-value-payments"
paymentId	String	M	Not allowed	Resource Identification of the related payment. "PIS"+YYMM+NNNNNNNN format

➤ Request Header

Same as Request Header in 1.5.3 "Inquiry of Applied Single Payment".

➤ Response Code (normal case)

Same as Response Code (normal case) in 1.5.3 "Inquiry of Applied Single Payment".

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Same as Response Header in 1.5.3 "Inquiry of Applied Single Payment".

➤ Response Body

Same as Response Body in 1.5.3 "Inquiry of Applied Single Payment".

➤ Request and response example

[Request]

```
(URI)    GET https://api.bk.mufg.jp/div1/corporation/v1/bulk-payments/sepa-credit-transfers

1.5.5 Inquiry of Account Information

➤ URI

GET https://api.bk.mufg.jp/div1/corporation/v1/accounts

➤ Summary

Returns list of accounts for which consent has been obtained.

consentId is used as the key of to perform inquiry, which has been returned from API upon POST /Consent.

➤ Description

(1) Accounts that can be inquired about

Accounts to be inquired about must be registered under GCMS Plus and consent for them must be obtained in advance.

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Consent-ID	String	M	Not allowed	Shall be contained since "Establish Consent Transaction" was performed via this API before. "AIS"+YYMM+NNNNNNNN format
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based authentication was performed in a pre-step or an OAuth2 based SCA was performed in the related consent authorization.
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not	The forwarded IP Port header

			allowed	field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant application installation. In case of installation identification this ID need to be unaltered until removal from device.

PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. * Same value set in the "X-Request-ID" field in Request Header will be returned.
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
accounts	(配列)		None	Generates an array for the number of accounts.
resourceId	String	1-64	None	Hashed value of the account number
iban	String	1-34	(*1)	Account number in IBAN format

bban	String	1-35	(*1)	Account number
currency	String	3-3	None	Currency code
name	String	1-20	(*1)	Account name
product	String	1-35	(*1)	First 35 characters of the account type
details	String	1-140	(*1)	Bank name and branch name are connected with a single-byte space.
_links			None	
balances			None	Link to the Inquiry of Account Balance API
href	String	1-512	None	"https://api.bk.mufig.jp/div1/corporation/v1/accounts/{account-id}/balances"
transactions			None	Link to the Inquiry of Transaction History API
href	String	1-512	None	"https://api.bk.mufig.jp/div1/corporation/v1/accounts/{account-id}/transactions"

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

➤ Request and response example

1.5.6 Inquiry of Account Balance

➤ URI

GET <https://api.bk.mufg.jp/div1/corporation/v1/accounts/{account-id}/balances>

➤ Summary

Returns balance information as of the latest date for a designated account.

resourceId is used as the key to perform inquiry, which has been returned from API upon GET /account.

This API's endpoint is set to the _links balances href field in the response information of the Inquiry of Account Information API. Add the following Request Header information to the endpoint and execute it.

➤ Description

(1) Accounts that can be inquired about

Balances to be inquired about must be registered under GCMS Plus and consent for them must be obtained in advance.

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
account-id	String	M	Not allowed	This identification is denoting the addressed account. The account-id is retrieved by using a "Read Account List" call. The account-id is the "resourceId" attribute of the account structure. Its value is constant at least throughout the lifecycle of a given consent. resourceId obtained via GET /v1/accounts/

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Consent-ID	String	M	Not allowed	"AIS"+YYMM+NNNNNNNN format
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based authentication

				was performed in a pre-step or an OAuth2 based SCA was performed in the related consent authorization.
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: • GET • POST

				<ul style="list-style-type: none"> • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	<p>UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available.</p> <p>UUID identifies either a device or a device dependant application installation. In case of an installation identification this ID need to be unaltered until removal from device.</p>
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	None	<p>ID of the request, unique to the call, as determined by the initiating party.</p> <p>*Same value set in the</p>

			"X-Request-ID" field in Request Header will be returned.
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
accounts			None	Identifier of the addressed account.
iban	String	1-34	(*1)	Account number in IBAN format
bban	String	1-35	(*1)	Account number
currency	String	3-3	None	Currency code
balances			(*1)	A list of balances regarding this account, e.g. the current balance, the last booked balance.
balanceAmount			None	Balance amount
currency	String	3-3	None	Currency code
amount	String	1-22	(*1)	Amount
balanceType	String	13-16	None	Transaction type "closingBooked" Or "interimAvailable"
referenceDate	String	10-10	None	Reference date YYYY-MM-DD format

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

1.5.7 Inquiry of Transaction History

➤ URI

GET https://api.bk.mufg.jp/div1/corporation/v1/accounts/{account-id}/transactions?{query-parameters}

➤ Summary

Returns transaction information of a designated account.

resourceId is used as the key to perform inquiry, which has been returned from API upon GET /account.

This API's endpoint is set to the _links transactions href field in the response information of the Inquiry of Account Information API. Add the following Query Parameters and Request Header information to the endpoint and execute it.

➤ Description

(1) Accounts that can be inquired about

Transactions to be inquired about must be registered under GCMS Plus and consent for them must be obtained in advance.

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
account-id	String	M	Not allowed	This identification is denoting the addressed account. The account-id is retrieved by using a "Read Account List" call. The account-id is the "id" attribute of the account structure. Its value is constant at least throughout the lifecycle of a given consent. account-id obtained via GET /v1/accounts/

➤ Query Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
dateFrom	ISODate	M	Not allowed	Starting date (inclusive the date dateFrom) of the transaction list, mandated if no delta access is required. Might be ignored if a delta function is used. YYYY-MM-DD format
dateTo	ISODate	O	(*1)	End date (inclusive the data

	e			dateTo) of the transaction list, default is now if not given. Might be ignored if a delta function is used. The current date is used if left blank. YYYY-MM-DD format
bookingStatus	String	M	Not allowed	Permitted codes are "booked", "pending" and "both" "booked" shall be supported by the ASPSP. To support the "pending" and "both" feature is optional for the ASPSP, Error code if not supported in the online banking frontend Fixed as "booked" by MUFG
withBalance	Boolean	O	(*2)	If contained, this function reads the list of transactions including the booking balance, if granted by the PSU in the related consent and available by the ASPSP. This parameter might be ignored by the ASPSP. Fixed as "true" or "false"

(*1) Determined by TPP. If left blank, the current date will be used.

(*2) Use the following values for each condition.

1 When the field is set;

(1) When a value is set;

i When the value is true → true

ii When the value is false → false

(2) When a value is not set; → false

2 When the field is not set → false

➤ Request Header M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not	ID of the request, unique to

			allowed	the call, as determined by the initiating party.
Consent-ID	String	M	Not allowed	"AIS"+YYMM+NNNNNNNN format
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based authentication was performed in a pre-step or an OAuth2 based SCA was performed in the related consent authorization.
Accept	String	M	Not allowed	<p>The TPP can indicate the formats of account reports supported together with a prioritisation following the HTTP header definition.</p> <p>The formats supported by this specification are</p> <ul style="list-style-type: none"> • xml • JSON • text <p>Remark: Content types might be extended in the next version of the specification. This shall enable the TPP to address different camt.05x versions or different MT94x versions in a corporate context.</p> <p>The TPP then could e.g. say: "I prefer MT942, but take MT940 if MT942 is not available."</p> <p>Fixed as "application/json" by MUFG</p>
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP.

				If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant

				application installation. In case of an installation identification this ID need to be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
Content-Type	String	None	Fixed as "application/json"
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
accounts			None	

iban	String	1-34	(*1)	Account number in IBAN format
bban	String	1-35	(*1)	Account number
currency	String	3-3	None	Currency code
transactions			None	JSON based account report.
booked			(*1)	(Repeatedly returned for the number of transactions)
entryReference	String	1-16	(*1)	Bank transaction number
endToEndId	String	1-16	(*1)	Customer reference number
bookingDate	String	10-10	None	Booking date YYYY-MM-DD format
valueDate	String	10-10	(*1)	Clearing date YYYY-MM-DD format
transactionAmount			None	Transaction amount
currency	String	3-3	None	Currency code
amount	String	1-22	None	Amount
remittanceInformationUnstructured	String	1-34	(*1)	Transaction information
proprietaryBankTransactionCode	String	1-30	(*1)	Transaction type (abbreviated)
informationToAccountOwner	String	1-395	(*1)	Information to the account holder
_links			None	Link
account			None	Account information Cannot be executed because the URI to be returned is not an available API.
href	String	1-512	None	"https://api.bk.mufg.jp/div1/corporation/v1/accounts/{account-id}"
balances			(*1)	A list of balances regarding this account, which might be restricted to the current balance. The latest balance within the date range set for dateFrom/dateTo in Query Parameters is returned.
balanceAmount			None	Balance amount

	currency	String	3-3	None	Currency code
	amount	String	1-22	(*1)	Amount
	balanceType	String	13-16	None	Transaction type "closingBooked" Or "interimAvailable"
	referenceDate	String	10-10	None	Reference date YYYY-MM-DD format

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

1.5.8 Creation of Consent

➤ URI

POST <https://api.bk.mufg.jp/div1/corporation/v1/consents>

➤ Summary

Creates end user's consent resource.

➤ Description

(1) Settlement account

Settlement account must be registered under GCMS Plus.

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
PSU-IP-Address	String	M	Not	The forwarded IP Address

			allowed	header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which

				is used by the PSU, if available. UUID identifies either a device or a device dependant application installation. In case of installation identification this ID need to be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Request Body

Attribute	Type	Digit	Condition	Null value	Description
recurringIndicator	Boolean	4-4	M	Not allowed	true, if the consent is for recurring access to the account data false, if the consent is for one access to the account data Fixed as "true" by MUFG
validUntil	String	10-10	M	Not allowed	This parameter is requesting a valid until date for the requested consent. The content is the local ASPSP date in

					<p>ISODate Format, e.g. 2017-10-30.</p> <p>If a maximal available date is requested, a date in far future is to be used: "9999-12-31".</p> <p>The consent object to be retrieved by the GET Consent Request will contain the adjusted date.</p> <p>Fixed as "9999-12-31" by MUFG</p>
frequencyPerDay	Integer	1-3	M	Not allowed	<p>This field indicates the requested maximum frequency for an access per day. For a one-off access, this attribute is set to "1".</p> <p>Set this field to "4".</p>
combinedServiceIndicator	Boolean	5-5	M	Not allowed	<p>Whether to use consent in creation of payment or not.</p> <p>Fixed as "false"</p>
access			M	Not allowed	
accounts			(*1)	(*2)	Account details
iban	String	1-34	M	(*2)	iban or bban must be set.
bban	String	1-35			
currency	String	3-3	C	(*2)	This field must be set when iban is set.
balances			(*1)	(*2)	Balance inquiry
iban	String	1-34	M	(*2)	iban or bban must be set.
bban	String	1-35			
currency	String	3-3	C	(*2)	This field must be set when iban is set.
transactions			(*1)	(*2)	Inquiry of Transaction History
iban	String	1-34	M	(*2)	iban or bban must be

	bban	String	1-35			set.
	currency	String	3-3	C	(*2)	This field must be set when iban is set.
	available Accounts	String	11-11	(*1)	(*2)	Target accounts (for specifying all) "allAccounts"
	available Accounts WithBalance	String	11-11	(*1)	(*2)	Target accounts (for specifying all) "allAccounts"
	allPsd2	String	11-11	(*1)	(*2)	Target accounts (for specifying all PSD2) "allAccounts"

(*1) Field setting (△: Optional, ×: Not allowed)

Fields to be set Fields that have been set	accounts	balances	transactions	available Accounts	available Accounts WithBalance	allPsd2
accounts	×	△	△	×	×	×
balances	△	×	△	×	×	×
transactions	△	△	×	×	×	×
availableAccounts	×	×	×	×	×	×
availableAccounts WithBalance	×	×	×	×	×	×
allPsd2	×	×	×	×	×	×

(*2) Do not set key/value if no value is set.

"Key":Null is not allowed.

➤ Response Code (normal case)

The HTTP response code equals 201.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
Location	String	None	Location of the created resource.

			"https://api.bk.mufig.jp/div1/corporation/v1/consents/AIS+YYMM+NNNNNNNN" format
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned. Header
ASPSP-SCA-Approach	String	None	Possible values are: • EMBEDDED • DECOUPLED • REDIRECT OAuth will be subsumed by the constant value REDIRECT Fixed as "REDIRECT"
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
consentId	String	14-14	None	Identification of the consent resource as it is used in the API structure Consent ID
consentStatus	String	8-8	None	authentication status of the consent "received"
_links	String		None	A list of hyperlinks to be recognised by the TPP. Type of links admitted in this response (which might be extended by single ASPSPs as indicated in its XS2A documentation):
scaOAuth			None	Link to the Issuance of Authorization Code API
href	String	1-512	None	"https://e.ebusiness.bk.mufig."

					jp/pfa2/oo01/open_cert/auth orize/"
	status			None	Cannot be executed because the URI to be returned is not an available API.
	href	String	1-512	None	https://api.bk.mufg.jp/div1/co rporation/v1/consents/{conse ntId}/status
	token			None	Link to the Issuance of Access Token API
	href	String	1-512	None	"https://api.bk.mufg.jp/div1/c orporation1/v1/oauth2/token"

1.5.9 Inquiry of Consent Information

➤ URI

GET <https://api.bk.mufg.jp/div1/corporation/v1/consents/{consentId}>

➤ Summary

Returns consent information.

consentId is used as the key to perform inquiry, which has been returned from API upon POST /consent. This API's endpoint is set to the Location field that in the response information for POST / Consents. Add the following Path Parameters, Request Header information to the endpoint and execute it.

➤ Description

(1) Consents that can be inquired about

Consents to be inquired about must be obtained in advance. Statuses are as follows.

Status	Description
received	The consent data have been received and are technically correct. The data is not authorised yet. - POST /Consent request has been received by GCMS Plus, and ConsentID has been generated
Valid	The consent is accepted and valid for GET account data calls and others as specified in the consent object. - POST /Consent has been executed, but ConsentID has not been generated yet
revokedByPsu	The consent has been revoked by the PSU towards the ASPSP. - Another new consent has been created by the same PSU, and the old consent has been revoked
terminatedByTpp	The corresponding TPP has terminated the consent by applying the DELETE method to the consent resource. - DELETE /consent has been executed, and the consent has been terminated

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
consentId	String	M	Not allowed	ID of the corresponding consent object as returned by an Account Information Consent Request Consent ID obtained via POST /v1/consents

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based SCA was performed in the corresponding consent transaction or if OAuth2 has been used in a pre-step.
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request

				between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant application installation. In case of installation identification this ID need to be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
recurringIndicator	String	4-4	None	Recurring access
validUntil	String	10-10	None	Consent expiration date
frequencyPerDay	Integer	1-3	None	Number of accesses per day
lastActionDate	String	10-10	None	This date is containing the date of the last action on the consent object either through the XS2A interface or the PSU/ASPSP interface having an impact on the status.
consentStatus	String	5-12	None	The status of the consent resource.
access			None	Accounts to be inquired about (Recurringly returns for the number of consented accounts/privileges)
accounts			(*1)	
iban	String	1-34	(*1)	IBAN
bban	String	1-35	(*1)	Account number
currency	String	3-3	(*1)	Currency code
balances			(*1)	
iban	String	1-34	(*1)	IBAN
bban	String	1-35	(*1)	Account number

1.5.10 Deletion of Consent

➤ URI

DELETE <https://api.bk.mufg.jp/div1/corporation/v1/consents/{consentId}>

➤ Summary

Deletes consent.

consentId is used to perform deletion, which has been returned from API upon POST /consent.

➤ Description

(1) Consents that can be deleted

Consents to be deleted must be obtained in advance.

Deleted consent status will be "terminatedByTpp".

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
consentId	String	M	Not allowed	Contains the resource-ID of the consent to be deleted. Consent ID obtained via POST /v1/consents

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based SCA was performed in the corresponding consent transaction or if OAuth2 has been used in a pre-step.
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP.

				If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used
PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant

				application installation. In case of installation identification this ID need to be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 204.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
Content-Type	String	None	Fixed as "application/json"
Date	Date	None	Format as per RFC1123

➤ Request and response example

1.5.11 Confirmation of funds availability

➤ URI

POST <https://api.bk.mufg.jp/div1/corporation/v1/funds-confirmations>

➤ Summary

Checks whether a specific amount is available on a designated account And returns a Yes(true) / No(false) answer..

➤ Description

(1) Determination of funds availability

Availability of funds is determined whether a designated account has sufficient amount of balance compared to the specified amount in the request data.

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
Content-Type	String	M	Not	Fixed as "application/json"

			allowed	
X-Request-ID	UUID	M	Not allowed	ID of the request, unique to the call, as determined by the initiating party.
Authorization	String	M	Not allowed	Is contained only, if an OAuth2 based authentication was performed in a pre-step or an OAuth2 based SCA was performed in the related consent authorization.
Consent-ID	String	C	XXXX	Shall be contained since "Establish Consent Transaction" was performed via this API before. "FCS"+YYMM+NNNNNNNN format
PSU-IP-Address	String	M	Not allowed	The forwarded IP Address header field consists of the corresponding HTTP request IP Address field between PSU and TPP. If not available, the TPP shall use the IP Address used by the TPP when submitting this request.
PSU-IP-Port	String	M	Not allowed	The forwarded IP Port header field consists of the corresponding HTTP request IP Port field between PSU and TPP, if available.
PSU-Accept	String	M	Not allowed	The forwarded IP Accept header fields consist of the corresponding HTTP request Accept header fields between PSU and TPP, if available.
PSU-Accept-Charset	String	M	Not allowed	Character set that can be used
PSU-Accept-Encoding	String	M	Not allowed	Encoding format that can be used

PSU-Accept-Language	String	M	Not allowed	Language code that can be used
PSU-User-Agent	String	M	Not allowed	The forwarded Agent header field of the HTTP request between PSU and TPP, if available.
PSU-Http-Method	String	M	Not allowed	HTTP method used at the PSU – TPP interface, if available. Valid values are: • GET • POST • PUT • PATCH • DELETE
PSU-Device-ID	String	M	Not allowed	UUID (Universally Unique Identifier) for a device, which is used by the PSU, if available. UUID identifies either a device or a device dependant application installation. In case of installation identification this ID need to be unaltered until removal from device.
PSU-Geo-Location	Geo Location	M	Not allowed	The forwarded Geo Location of the corresponding HTTP request between PSU and TPP if available.
Date	Date	O	(*1)	Format as per RFC1123
X-IBM-Client-Id	-	(*2)	(*2)	Set the client ID of the registered application.
X-Client-Certificate	-	(*2)	(*2)	Set the client certificate registered as per 5.2.8 "Registration of client certificate".

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

(*2) Required only for Test Facility

➤ Request Body M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Digit	Condition	Null value	Description
account			M	Not allowed	PSU's account number.
iban	String	1-34	M	(*1)	iban or bban must be set.
bban	String	1-35			
currency	String	3-3	C	(*1)	This field must be set when iban is set.
instructedAmount			M	Not allowed	Transaction amount to be checked within the funds check mechanism.
currency	String	3-3	M	Not allowed	
amount	String	1-14	M	Not allowed	

(*1) Do not set key/value if no value is set.

"Key":Null is not allowed.

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Attribute	Type	Returning Null data	Description
Content-Type	String	None	Fixed as "application/json"
X-Request-ID	UUID	None	ID of the request, unique to the call, as determined by the initiating party. *Same value set in the "X-Request-ID" field in Request Header will be returned.
Date	Date	None	Format as per RFC1123

➤ Response Body

Attribute	Type	Digit	Returning	Description

1.5.12 Creation of Consent(FCS)

➤ URI

POST <https://api.bk.mufg.jp/div1/corporation/v2/consents/confirmation-of-funds>

➤ Summary

Creates end user's consent resource (FCS service).

➤ Description

(1) Settlement account

Settlement account must be registered under GCMS Plus.

➤ Request Header

Same as Request Header in 1.5.8 "Creation of Consent ".

➤ Request Body

Attribute	Type	Digit	Condition	Null value	Description
account			M	Not allowed	
iban	String	1-34	M	(*2)	iban or bban must be set.
bban	String	1-35			
currency	String	3-3	C	(*2)	This field must be set when iban is set.

(*2) Do not set key/value if no value is set.

"Key":Null is not allowed.

➤ Response Code (normal case)

The HTTP response code equals 201.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Same as Response Header in 1.5.8 "Creation of Consent ".

➤ Response Body

Attribute	Type	Digit	Returning Null data	Description
consentId	String	14-14	None	Identification of the consent resource as it is used in the API structure Consent ID
consentStatus	String	8-8	None	authentication status of the consent "received"
_links	String		None	A list of hyperlinks to be recognised by the TPP. Type of links admitted in this response (which might be extended by single ASPSPs as indicated in its XS2A documentation):
scaOAuth			None	Link to the Issuance of Authorization Code API
href	String	1-512	None	"https://e.ebusiness.bk.mufig.jp/pfa2/oo01/open_cert/authorize/"
status			None	Cannot be executed because the URI to be returned is not an available API.
href	String	1-512	None	https://api.bk.mufig.jp/div1/corporation/v1/consents/{consentId}/status
token			None	Link to the Issuance of Access Token API
href	String	1-512	None	"https://api.bk.mufig.jp/div1/corporation3/v1/oauth2/token"

1.5.13 Inquiry of Consent Information(FCS)

➤ URI

GET <https://api.bk.mufig.jp/div1/corporation/v2/consents/confirmation-of-funds/{consentId}>

➤ Summary

Returns consent information (FCS service).

consentId is used as the key to perform inquiry, which has been returned from API upon POST /consent. This API's endpoint is set to the Location field that in the response information for POST /v2/consents/confirmation-of-funds. Add the following Path Parameters, Request Header information to the endpoint and execute it.

➤ Description

(1) Consents that can be inquired about

Same as (1) Consents that can be inquired about in 1.5.9 "Inquiry of Consent Information".

➤ Path Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
consentId	String	M	Not allowed	ID of the corresponding consent object as returned by an Account Information Consent Request Consent ID obtained via POST /v2/consents/confirmation-of-funds

- Request Header
Same as Request Header in 1.5.9 " Inquiry of Consent Information".
- Response Code (normal case)
The HTTP response code equals 200.
*See 1.5.17 "Response object (error case)" for responses in case of error.
- Response Header
Same as Response Header in 1.5.9 " Inquiry of Consent Information".

- Response Body

Attribute	Type	Digit	Returning Null data	Description
consentStatus	String	5-12	None	The status of the consent resource.
account			None	Accounts to be inquired about (Recurringly returns for the number of consented accounts/privileges)
iban	String	1-34	(*1)	IBAN
bban	String	1-35	(*1)	Account number
currency	String	3-3	(*1)	Currency code

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

- Request and response example

consentId	String	M	Not allowed	Contains the resource-ID of the consent to be deleted. Consent ID obtained via POST /v2/consents/confirmation-of-funds

➤ Request Header

Same as Request Header in 1.5.10 "Deletion of Consent".

➤ Response Code (normal case)

The HTTP response code equals 204.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Header

Same as Response Header in 1.5.10 "Deletion of Consent".

➤ Request and response example

[Request]

```
(URI)  DELETE
       https://api.bk.mufig.jp/div1/corporation/v2/consents/confirmation-of-funds/FCS19020001234
(HTT  X-Request-ID: 99391c7e-ad88-49ec-a2ad-99ddcb1f7721

```

1.5.15 Issuance of Authorization Code

➤ URI (Redirects to the authentication screen)

https://e.ebusiness.bk.mufig.jp/pfa2/oo01/open_cert/authorize/?{query-parameters}

➤ Summary

Returns a redirect message to the authentication screen (COMSUITE API Service login screen) to customer's browser, and then an authorization code will be received.

If processing is aborted and an authorization code is not issued (in cases such as PSU rejecting to give consent, an error occurs, etc.), please start again from POST payments.

➤ Description

(1) Returning from MUFG → TPP

Responding to POST Payments or POST Consents, returns the redirect destination of the authentication screen (COMSUITE API Service login screen) to issue an access token via OAuth2.0.

The redirect destination information is set to the `_links.scaOAuth.href` field.

(2) Redirecting from TPP → PSU

Add Query Parameters information to the redirect destination information returned from MUFG, and return the 302 redirect message to the customer's browser.

➤ Query Parameters (Request)

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
response_type	-	M	Not allowed	Fixed as "code"
client_id	-	M	Not allowed	organizationIdentifier as provided in the eIDAS and OBWAC certificate. The organizationIdentifier attribute shall contain information using the following structure in the presented order: - "PSD" as 3 character legal

				<p>person identity type reference;</p> <ul style="list-style-type: none"> - 2 character ISO 3166 country code representing the NCA country; - hyphen-minus "-" and - 2-8 character NCA identifier (A-Z uppercase only, no separator) - hyphen-minus "-" and - PSP identifier (authorization number as specified by NCA). E.g.) PSDES-BDE-3DFD21 <p>client_id must be encoded since the following characters may be included.</p> <p>space " ",</p> <p>hyphen-minus "-",</p> <p>colon ":",</p> <p>underscore "_",</p> <p>period ".",</p> <p>slash "/"</p>
scope	-	M	Not allowed	<p>Set the following values.</p> <p>("AIS:" or "PIS:" or "FCS:" + ID)</p> <p>"PIS:payment ID"</p> <p>"AIS:consentID"</p> <p>"FCS:consentID"</p>
state	-	M	Not allowed	A dynamical value set by the TPP and used to prevent XSRF attacks.
redirect_uri	-	M	Not allowed	the URI of the TPP where the OAuth2 server is redirecting the PSU after the authentication.
code_challenge	-	M	Not allowed	PKCE challenge according to cryptographic RFC 7636 (https://tools.ietf.org/html/rfc7636) used to prevent code

				injection attacks.
code_challenge_method	-	M	Not allowed	Fixed as "S256"

(*) Required only for Test Facility

➤ Response Code (normal case)

The HTTP response code equals 302.

*Error screen is displayed for PSU in case of error.

See the list of error codes for details.

➤ Query Parameters (Response)

Attribute	Type	Returning Null data	Description
Location	-	None	redirect URI of the TPP [Redirect URI]?code=[Authorization code]&state=[State]
code	-	None	Authorization code
state	-	None	Same value as for the request.

➤ Request and response example

[Request]

In case of PIS

```
U GET https://e.ebusiness.bk.mufig.jp/pfa2/oo01/open_cert/authorize/?
RI response_type=code&client_id=PSDES-BDE-3DFD21
&scope=PIS:PIS19020004220&state=S8NJ7uqk5fY4EjNvP_G_FtyJu6pUsvH9jsYni9dMAJw&re
direct_uri=https%3A%2F%2Fclient%2Eexample%2Ecom%2Fcb
&code_challenge=5c305578f8f19b2dcdb6c3c955c0aa709782590b4642eb890b97e43917cd0f36
&code_challenge_method=S256
```

[Response]

```
HTTP/1.1 302 Found
Location:
https://client.example.com/cb?code=SpIxIOBeZQQYbYS6WxSblA&state=S8NJ7uqk5fY4EjNvP_G_FtyJ
u6pUsvH9jsYni9dMAJw
```

1.5.16 Issuance of Access Token

➤ URI

For PIS POST https://api.bk.mufig.jp/div1/corporation2/v1/oauth2/token

For AIS POST https://api.bk.mufig.jp/div1/corporation1/v1/oauth2/token

For FCS POST <https://api.bk.mufg.jp/div1/corporation3/v1/oauth2/token>

➤ Summary

Issues an access token.

➤ Description

Issues an access token for a designated authorization code.

MUFG's OAuth2.0 does not support refresh of access tokens.

When the access token expires, error No.12 or No.13 listed in 6.1 "List of error codes (Validation/system error)" will be returned. In such case, please see 1.5.12 "Issuance of Authorization Code" and 1.5.13 "Issuance of Access Token" to re-issue the access token.

Validity period of access tokens differs depending on the course used.

PIS: 30 days, AIS: 90 days, FCS: 732 days

➤ Request Parameters

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
grant_type	-	M	Not allowed	"authorisationCode" is recommended as response type. Fixed as "authorization_code"
client_id	-	M	Not allowed	cp.1.5.12
Code	-	M	Not allowed	Authorization code from the authorization response
redirect_uri	-	M	Not allowed	The exact uri of the TPP where the OAuth2 server redirected the user agent to for this particular transaction
code_verifier	-	M	Not allowed	PKCE verifier according to cryptographic RFC 7636 (https://tools.ietf.org/html/rfc7636) used to prevent code injection attacks.

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Null value	Description
Content-Type	String	M	Not allowed	Fixed as "application/x-www-form-urlencoded"

➤ Response Code (normal case)

The HTTP response code equals 201.

*See 1.5.17 "Response object (error case)" for responses in case of error.

➤ Response Parameters

Attribute	Type	Returning Null data	Description
access_token	-	None	Access Token bound to the scope as requested in the authorization request and confirmed by the PSU.
token_type	-	None	Set to "Bearer"
expires_in	-	None	The lifetime of the access token in seconds
scope	-	None	the scope of the access token

➤ Request and response example

In case of PIS

[Request]

```

URI    POST https://api.bk.mufig.jp/div1/corporation2/v1/oauth2/token
(HT    Content-Type: application/x-www-form-urlencoded
TP
Hea
der)
(HT    grant_type=authorization_code&client_id=PSDES-BDE-3DFD21&code=SpIxIOBeZQQYbYS6WxSb
TP    IA&redirect_uri=https://api.testbank.com&code_verifier=7814hj4hjai87qqhjz9hahdeu9qu771367647
Bod    864676787878
y)

```

[Response]

```

(HT    HTTP/1.1 201 OK
TP
Hea
der)
(HT    {
TP      "token_type": "bearer",
Bod      "access_token":

```

```

    "expires_in": 7776000,
    "scope": "gcms:PIS"
  }

```

1.5.17 Response object (error case)

➤ Response Code

The HTTP response code equals 400~599.

➤ Response Header

Attribute	Type	Returning Null data	Description
X-Request-ID	UUID	(*1)	Request ID determined by TPP, which is unique to each call See the list of error codes for details.
Date	Date	(*1)	On every call, the request time stamp is included in the mandatory HTTP header "Date". See the list of error codes for details.

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

➤ Response Body

Attribute	Type	Returning Null data	Description
httpCode		(*1)	Same value as the http status code See the list of error codes for details.
httpMessage		(*1)	Character string of the http status code See the list of error codes for details.
moreInformation		(*1)	Detailed message for TPP See the list of error codes for details.
transactionStatus		(*1)	Payment request See the list of error codes for details.
tppMessage		(*1)	Message informing TPP of operational problems.

category	String	(*1)	Error category See the list of error codes for details.
code	String	(*1)	Error code See the list of error codes for details.
text	String	(*1)	Detailed message See the list of error codes for details.

(*1) Neither the key nor value is returned if there is no data to be returned for the field.

1.6 Service hours

➤ Production environment

MUFG's Production Environment is available 24 hours a day except for the following regular maintenance window;

Service suspension period
Saturday 22:00 (JST) ~ Monday 02:00 (JST) every week

➤ Test Facility

Test Facility can be used 24 hours a day regardless weekdays or weekend. Note that the Test Facility may be unavailable without pre-notice due to any urgent maintenance.

➤ Availability SLO (Service Level Objective): 99.0%

1.7 Notes for development

➤ Privileges

API availability of each user differs depending on their privilege as set via GCMS Plus.

The following shows the availability patterns under each GCMS Plus privilege. If the user chooses the [MYS] available hours, availability also depends on execution time.

POST /payments/{payment-product}

Privilege in G+		Available account (Clearing) information	
		Yes	No
Apply New privilege	Yes	○	×
	No	×	×

GET /payments/{payment-product}/{paymentId}/status

Privilege in G+		Available account (Inquiry) information	
		Yes	No
Service inquiry privilege	Yes	○	×
	No	×	×

GET /accounts

Privilege in G+		Consent obtainment status of the account		
		Obtained for accounts	Obtained for balances	Obtained for transactions
Account Report	Yes	○	○	○
	No	×	×	×

GET /accounts/{account-id}/balances

Privilege in G+		Consent obtainment status of the account		
		Obtained for accounts	Obtained for balances	Obtained for transactions
Account Report	Yes	×	○	×
	No	×	×	×

GET /accounts/{account-id}/transactions

Privilege in G+		Consent obtainment status of the account		
		Obtained for accounts	Obtained for balances	Obtained for transactions
Account Report	Yes	×	×	○
	No	×	×	×

2. Operating environment

The API standard of GCMS Plus complies with Berlin Group. Also, certificates used for APIs comply with eIDAS and OBWAC.

OS and browser depend on the support environment of GCMS Plus.

Berlin Group : <https://www.berlin-group.org/>
eIDAS : <https://www.eid.as/home/>
GCMS Plus : https://www.bk.mufig.jp/ebusiness/e/gplus/environment_otp.html

3. Connection method

3.1 Processing method

This section describes notes for development, such as processing methods when calling API.

3.1.1 General information of APIs

➤ Implementation of OAuth2.0

MUFG's OAuth2.0 API complies with the RFC6749 rules/Berlin Group. See [6. "List of error codes"](#) for API check specifications, etc.

➤ Invalidation conditions for access tokens

AIS: 90 days and PIS: 30 days are set as the validity period for access tokens.

However, even within the validity period, re-registration may be required depending on the customer's status. Also expired access tokens will be invalidated. MUFG does not support refresh tokens, so re-authentication is required by customers upon invalidation.

See [6. "List of error codes"](#) for error details upon invalidation.

➤ Functions for access token invalidation and release of invalidation

As TPP, please develop system functions (token invalidation, etc.) and prepare to respond to customers' requests to suspend usage, terminate usage, and release suspension of COMSUITE API Service.

3.2 Others

3.2.1 Volume limit

➤ There is a limit on the number of API calls per unit hour per TPP (client ID).

➤ The number of API calls is counted per requested API.

➤ If the volume limit is exceeded, it is responded with error details.

➤ Basically, the limit is 2 calls/s (per API).

(E.g.) Three API requests for balance inquiries in a second → Up to two are accepted, and the third is responded to with an error.

Two API requests for balance inquiry and one API request for transaction inquiry in a second → All are accepted because each number of requests is within the limit per API.

➤ Separate from the volume limit per TPP, there is another limit on the number of calls that can be accepted simultaneously by MUFG. When the limit is exceeded (busy status), all TPPs are responded with an error of limit excess.

➤ If a volume excess error (HTTP status 429 or 430) is received, TPP should control the volume to ensure a sufficient interval until the next request.

➤ TPP needs to adequately schedule evening batches so as not to reach the limit on the number of API

calls.

3.2.2 Behavior in case of error

Behavior for returning MUFG's API errors complies with Berlin Group 1.3. See [6. "List of error codes"](#) for error details.

3.2.3 Questions about APIs

Submit questions to the contact at MUFG as per the guidance of the COMSUIITE API Portal.

4. On Boarding Process

See COMSUIITE API Portal "Getting started" page.

5. Test Facility

5.1 Test Facility

MUFG's API is made available individually for the COMSUIITE API Portal user ID that is provided to MUFG.

5.1.1 Functions to be provided

Test Facility is comprised of "Mockup API" to simulate the production environment APIs and "Debug Tool Kit" to drop test data.

➤ Mockup API

Each API is simulated based on dummy data.

Differences from the production environment APIs are described below.

POST /v1/payments/{payment-product}

Statuses after submission cannot be updated by requests.

(because no subsequent functions after payment (approval/rejection function on G+) are provided.)

POST /v1/ bulk-payments/{payment-product}

A normal response returns response data of fixed values.

GET /v1/payments/{payment-product}/{paymentId}/status

Statuses and error information that never occur in the Test Facility (e.g. transactionStatus is ACSP) are stored in dummy data. To obtain this information, set paymentId of each dummy data in your request data.

See [5.2.2 "List of dummy data"](#) for details.

GET /v1/ bulk-payments /{payment-product}/{paymentId}/status

A normal response returns response data of fixed values.

GET /v1/accounts?{query-parameters}

GET /v1/accounts/{account-id}/balances

GET /v1/accounts/{account-id}/transactions?{query-parameters}

The above API is no different from the API specifications of Production Environment.

POST /v1/consents

POST /v2/consents/confirmation-of-funds

Statuses after submission cannot be updated by above requests.

(because data required for updating the status (e.g. PSU user information) is not held.)

GET /v1/consents/{consentId}

GET /v2/consents/confirmation-of-funds/{consentId}

For the above API, statuses that never occur in the Test Facility (e.g. consentStatus is revokedByPsu) are stored in dummy data. To obtain this information, set consentId of each dummy data in your request data.

See [5.2.2 "List of dummy data"](#) for details.

DELETE /v1/consents/{consentId}

DELETE /v2/consents/confirmation-of-funds/{consentId}

For the above API, registered information is not updated, and actual deletion (change of consentStatus to terminatedByTpp) is not performed. Based on request information, it only determines whether the consent can be deleted or not.

POST /v1/funds-confirmations

The above API is no different from the API specifications of Production Environment.

GET /authorize

For the above API, the same customer authentication as Production Environment does not exist, and a static customer authentication screen is generated.

POST /token

In the above API, access tokens never expire.

➤ Debug Tool Kit

Error Registration Tool

Forcedly instructs the specified API to return error response. See I/F definition in [5.2.3 "Error Registration Tool"](#) for debug tool specifications.

5.1.2 Service hours

Test Facility can be used 24 hours a day regardless weekdays or weekends.

(It may be suspended without prior notification due to maintenance, etc.)

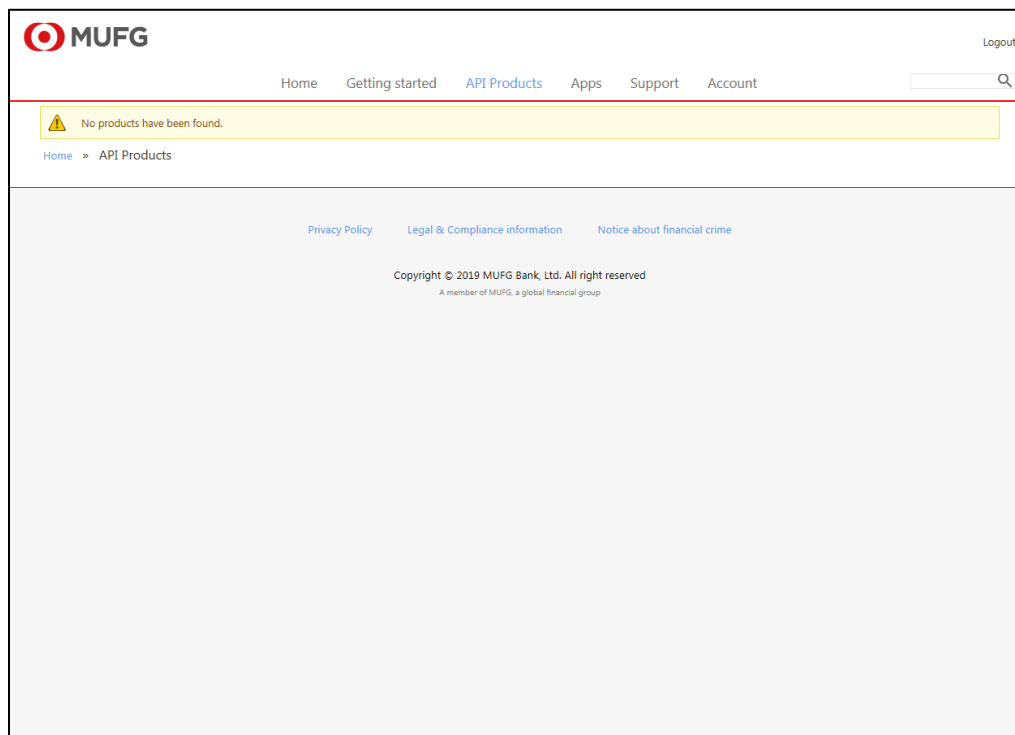

5.1.3 Test method

➤ Starting test

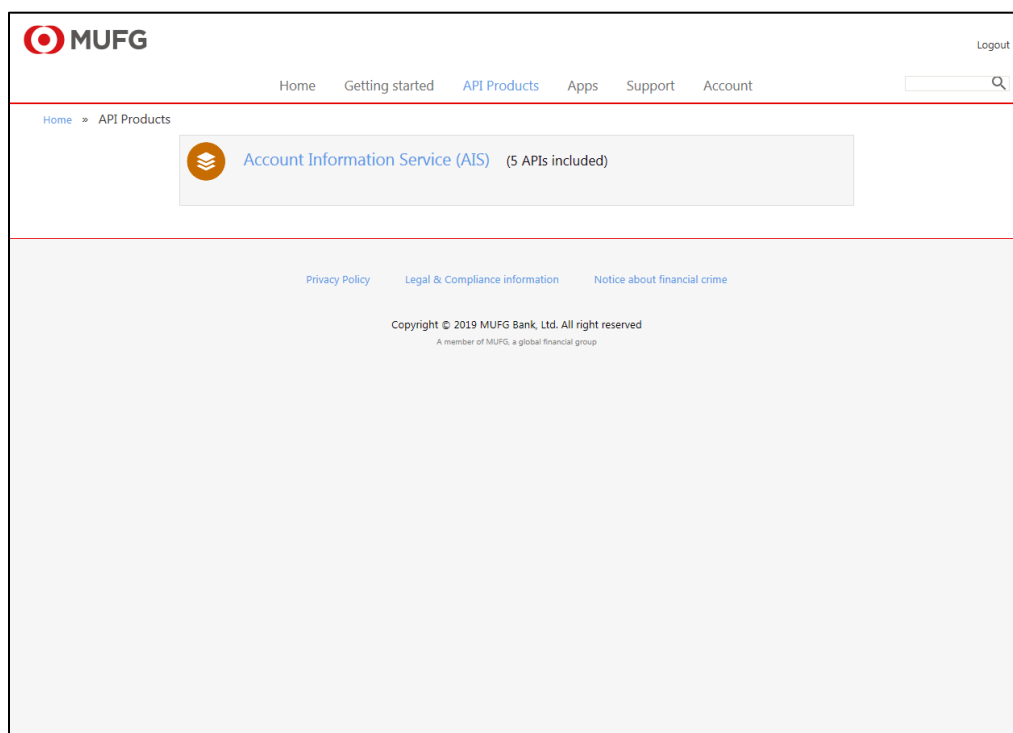

Please go through the following procedure to perform tests.

(1) Test Facility is opened upon application for use.

E.g.) Before application

E.g.) After application

Please confirm that the number of selected API products is increased.

- (2) After informed by MUFG that Test Facility is available, select a course to be used respectively for AIS, PIS, or FCS from the above screen, and subscribe for a client ID for testing.
- (3) Perform test to check variations in the test data and error occurrence status. Use Error Registration Tool from the debug tool as needed.

➤ Volume limit

The API volume limit for Test Facility is 2 calls/s (per API).

5.2 Functions to be provided

5.2.1 I/F definition of Test Facility

Other than URI are same as the production environment APIs. See the list of endpoints in the table below and [1.5 "API I/F definition"](#) for details.

List of endpoints for Test Facility

Product name	API name	API endpoints
Payment Initiation Service	payments1	POST https://developer1.api.bk.mufg.jp/div1/corporation/v1/payments/{payment-product}
	bulk-payments1	POST

(PIS)		https://developer1.api.bk.mufig.jp/div1/corporation/v1/bulk-payments/{payment-product}
	payments2	GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/payments/{payment-product}/{paymentId}/status
	bulk-payments2	GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/bulk-payments/{payment-product}/{paymentId}/status
	authorizations2	GET https://developer1.api.bk.mufig.jp/div1/corporation2/v1/oauth2/authorize?{query-parameters}
		POST https://developer1.api.bk.mufig.jp/div1/corporation2/v1/oauth2/token
Account Information Service (AIS)	consents1	POST https://developer1.api.bk.mufig.jp/div1/corporation/v1/consents
	consents2	GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/consents/{consentId}
		DELETE https://developer1.api.bk.mufig.jp/div1/corporation/v1/consents/{consentId}
	accounts	GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/accounts
		GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/accounts/{account-id}/balances
		GET https://developer1.api.bk.mufig.jp/div1/corporation/v1/accounts/{account-id}/transactions?{query-parameters}
	authorizations1	GET https://developer1.api.bk.mufig.jp/div1/corporation1/v1/oauth2/authorize?{query-parameters}
		POST https://developer1.api.bk.mufig.jp/div1/corporation1/v1/oauth2/token
Fund Confirmation Service (FCS)	funds-confirmations1	POST https://developer1.api.bk.mufig.jp/div1/corporation/v2/consents/confirmation-of-funds
	funds-confirmations2	POST https://developer1.api.bk.mufig.jp/div1/corporation/v1/funds-confirmations
		GET https://developer1.api.bk.mufig.jp/div1/corporation/v2/consents/confirmation-of-funds/{consentId}
		DELETE https://developer1.api.bk.mufig.jp/div1/corporation/v2/consents/confirmation-of-funds/{consentId}
	authorizations3	GET https://developer1.api.bk.mufig.jp/div1/corporation3/v2/oauth2/authorize
		POST https://developer1.api.bk.mufig.jp/div1/corporation3/v1/oauth2/token

5.2.2 List of dummy data

Please see "List_of_dummy_data" in the same zip file.

5.2.3 I/F definitions of Error Registration Tool

Error Registration Tool simulates error patterns that cannot occur with Mockup API. Executing the API after execution of Error Registration Tool enables error response to be received. Once an error occurs, registered error information is erased, and hereafter, normal response is received for API execution.

➤ URI

POST <https://developer1.api.bk.mufig.jp/div1/corporation/debugtoolkit/v1/mockerrorset>

➤ Summary

Registers error (output) details and outputs them upon execution of API.

➤ Description

Outputs specified error information in accordance with requested conditions.

One error (output) can be registered per API. If multiple errors are registered for one API, the error information registered last is output.

(1) Error types that can be registered

See the list of available error codes for errors that can be registered.

(2) Error information designation method

Specify the target API for which the error is to be generated in the `apiCode` field of the Request Body, and the error code of the error to be generated in the `errorCode` field.

See the following Request Body for details.

(3) Error information deletion method

Specify "99"(DELETE_ALL) in the `apiCode` field to delete all registered error information. Returns the number of deleted errors as response information.

➤ Request Header

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Description
X-IBM-Client-Id	String	M	ID that identifies TPP E.g.:1dee5142-8590-4c92-ae57-d4325d797daf

➤ Request Body

M:Mandatory, O:Optional, C:Conditional

Attribute	Type	Condition	Description
apiCode	String	M	API for which the error is to be generated 01:POST_/payments/{payment-product}

			02:GET_/payments/{payment-product}/{paymentId}/status 03:GET_/accounts 04:GET_/accounts/{account-id}/balances 05:GET_/accounts/{account-id}/transactions 06:POST_/consents 07:GET_/consents/{consentId} 08:DELETE_/consents/{consentId} 09:GET_/authorize 10:POST_/token 12:POST_/bulk-payments/{payment-product} 13:GET_/bulk-payments/{payment-product}/{paymentId}/status 15:POST_/v2/consents/confirmation-of-funds 16:GET _/v2/consents/confirmation-of-funds/{consentId} 17:DELETE _/v2/consents/confirmation-of-funds/{consentId} 18:POST_/v1/funds-confirmations 99:DELETE_ALL *Error in case code does not exist.
errorCode	String	C	Error code of the error to be generated Field setting is not required when 99:DELETE_ALL is specified for apiCode. See the list of available error codes

➤ Response Code (normal case)

The HTTP response code equals 200.

*See 1.5.17 "Response object (error case)" for responses in case of error.

Response Body (when apiCode of Request Body is "01" ~ "10", "12" ~ "18")

Attribute	Description
apiCode	API for which error is to be generated E.g.: "06"
errorCode	Error code to be generated E.g.: "DBG0000001"

Response Body (when apiCode of Request Body is "99")

Attribute	Description
count	Number of errors deleted E.g.: "3"

➤ Request and response example

E.g.: When registering error of API code = "06"(POST_consent), Error code = DBG0000001

[Request]

(HTTP Header)	X-IBM-client-id: 8b0df53b-b46d-4d4c-bf13-373a3b114d98 content-type:application/json
(HTTP Body)	{ apiCode:"06 ", errorCode:"DBG0000001" }

[Response]

(HTTP Header)	HTTP/1.1 200 OK Content-Type: application/json Date: Thu, 24 Nov 2016 07:53:20 GMT
(HTTP Body)	{ "apiCode": "06", "errorCode": "DBG0000001" }

5.2.4 List of errors of Error Registration Tool

List of errors (Validation / System error)

errorCode	Response Information			
	HTTP	Body		
	Status	httpCode	httpMessage	moreInformation
OA00000001	404	404	Not Found	Incorrect URI. Please verify URI and try again.
OA00000002	404	404	Not Found	No resources match requested URI
OA00000003	500	500	Internal Server Error	Invalid JSON format
OA00000004	422	422	Invalid	Validate REST: [JSV0001] Invalid value type 'string'.
OA00000005	401	401	Unauthorized	Client id not registered.
OA00000006	401	401	Unauthorized	Client id in wrong location.

OA00000007	401	401	Unauthorized	Client id in wrong location.
OA00000008	401	401	Unauthorized	invalid_client: client_id unauthorized
OA00000009	500	500	Internal Server Error	Please verify Digital Certificate and try again. Please contact your servicing MUFG Bank office for further assistance.
OA00000010	401	401	Unauthorized	This server could not verify that you are authorized to access the URL
OA00000011	401	401	Unauthorized	invalid_grant: token revoked by resource owner
OA00000012	401	401	Unauthorized	Not registered to plan
OA00000013	401	401	Unauthorized	unauthorized: Application is suspended
OA00000014	401	401	Unauthorized	Application is not active.
OA00000015	401	401	Unauthorized	invalid_url: token revoked
OA00000016	403	403	Forbidden	Access to resource denied due to mismatching client_id

5.2.5 Overview of Test Facility authentication method and API call

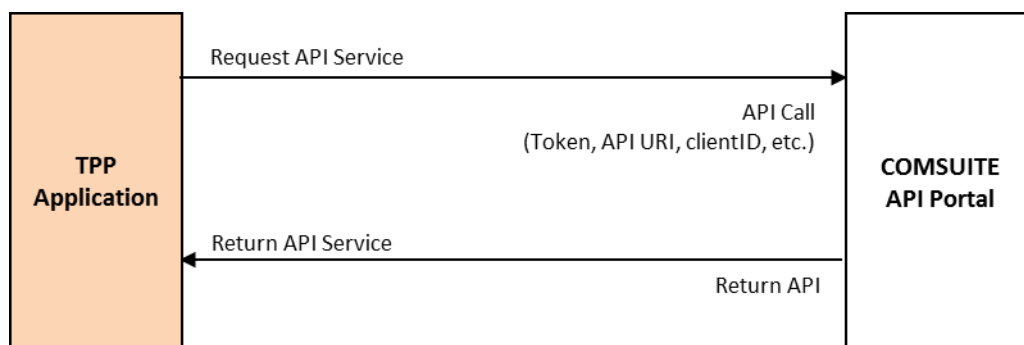

➤ Mechanism of authentication/authorization

Authentication and authorization processes when Test Facility is used are as follows.

➤ Mechanism for API call

The process when Test Facility is used is as follows. (It is assumed that authentication/authorization is done and tokens are issued for the process.)

5.2.6 Lifecycle of access tokens

Tokens never expire. Before checking behavior upon token invalidation, make the invalidated state with the Debug Tool Kit (Error Registration Tool).

5.2.7 Setting of redirect URI

Set redirect URI from the API key issuance registration screen or the registered API key editing screen of the API developer portal. Input redirect URI used for your company's test in the "OAuth Redirect URI" field on these screens.

Logout

HomeGetting startedAPI ProductsAppsSupportAccount

Home » Create Application

Register application

Title *

Enter preferable title such as application name, API user name etc.

Description

Enter any other information if necessary.

OAuth Redirect URI

The URL authenticated OAuth flows for this application should be redirected to.

Certificate

Paste the content of your application's x509 certificate.

Submit

5.2.8 Registration of client certificates

Set client certificate information from the API key issuance registration screen or the registered API key editing screen of the API developer portal. Input and register client certificates to be used for your company's test in the "Certificate" field on these screens.

Logout

6. List of error codes

6.1 List of error codes (Validation/system error)

#	API (*)	Response information				Cause	Solution
		HTT P sta tus	body				
			httpCod e	httpMessage	moreInformation		
1	01 ~ 16	404	404	Not Found	No resources match requested URI	URL error (2): API URL does not exist in the organization or catalog. /Organization name/[catalog name]/corporation/v1/accounts/{account_id}/VV	TPP corrects the setting of the destination URL at the time of API call.
2	01 ~ 16	500	500	Internal Server Error	Invalid JSON format	Http body error (1): Not correct as JSON	TPP corrects the transmission message.
3	01 ~ 16	422	422	Invalid	Validate REST: [JSV0001] Invalid value type 'string'.	Http body error (2): Not the JSON defined as IF	TPP corrects the transmission message.
4	01 ~ 16	401	401	Unauthorized	Client id not registered.	client_id value is not correct.	TPP corrects the transmission message.
5	02 ~ 05 07	401	401	Unauthorized	This server could not verify that you are authorized to access the URL	access_token is incorrect or expired.	TPP corrects the transmission message, or re-executes after re-obtaining access token.

	08 12 13 15 16						
6	02 ~ 05 07 08 12 13 15 16	401	401	Unauthorized	invalid_grant: token revoked by resource owner	access_token is invalidated.	TPP asks PSU to re-obtain authorization code.
7	01 ~ 16	401	401	Unauthorized	Not registered to plan	Application non-registration check (Error when API is called with an unsubscribed client ID.)	Performs registration if unintentionally unregistered.
8	01 ~ 16	401	401	Unauthorized	invalid_url: token revoked	Could not connect to invalidated URL endpoint.	TPP corrects the transmission message.
9	02 ~ 05	403	403	Forbidden	Access to resource denied due to mismatching client_id	A client_id that differs from the client_id when the access_token was issued, is specified.	TPP corrects the transmission message.

	07 08 12 13 15 16						
10	01 ~ 16	405	405	Method Not Allowed	The method is not allowed for the requested URL	API URL exists, but an operation that supports the request does not exist. (POST is sent for URL of GET.)	TPP corrects the transmission message.
11	01 ~ 16	429	429	Too Many Requests	Rate Limit exceeded	Volume control error (throughput limit)	Should be used within the volume limit.
12	02 ~ 05 07 08 12 13 15 16	403	403	Forbidden	invalid_scope: did not match the requested resource: [¥"corporation:transfer¥"] *The scope name that was missing is to be entered into the corporation:transfer portion.	Call for an operation API that is not included in the scope of the access token that has been obtained.	TPP specifies the appropriate scope's token.
13	01 ~	500	500	Internal Server Error	Invalid JSON property value	Character string is used in the numeric value field within the JSON data	TPP corrects the transmission message.

	16						
14	01 ~ 16	500	500	Internal Server Error	Convert HTTP produced invalid XML: illegal character xxxxx (xxxxx depends on the error details. Different error may also be possible.)	Characters that cannot be processed are included in the JSON data	TPP corrects the transmission message.
15	01 06 11 13 14	400	400	Bad Request	The body of the request, which was expected to be JSON, was invalid, and could not be decoded. The object syntax was invalid.	Request information is not JSON format (The incorrect section is the object field)	TPP corrects the transmission message.
16	01 06 11 13 14	400	400	Bad Request	The body of the request, which was expected to be JSON, was invalid, and could not be decoded. The array syntax was invalid.	Request information is not JSON format (The incorrect section is the array field)	TPP corrects the transmission message.
17	01 06 11 13 14	422	422	Invalid	Validate REST: xa35://tmp/temp_11598:1: [JSV0001] Invalid value type {0}. {0}: Mismatched request field type (String, integer, etc.)	Fields other than the I/F definition are included	Notify PSU of the validation error.
18	01-1	422	422	Invalid	Validate REST: xa35://tmp/temp_11472:1: [JSV0002] Invalid object: the property 'requestedExecutionDate' is missing.	requestedExecutionDate does not exist	Notify PSU of the validation error.

19	01-1 01-5	422	422	Invalid	Validate REST: xa35://tmp/temp_09401:1: [JSV0007] Invalid string: {\$0} does not match pattern '^[0-9]{4}-[0-1][0-9]-([0-2][0-9])3[0-1])\$'. {\$0}: Input value for requestedExecutionDate	Format of requestedExecutionDate is not YYYY-MM-DD	Notify PSU of the validation error.
20	01-1 01-5	422	422	Invalid	Validate REST: xa35://tmp/temp_11472:1: [JSV0002] Invalid object: the property 'paymentType' is missing.	paymentType does not exist	Notify PSU of the validation error.

Account balance transaction inquiry privilege check	Provide the error text to PSU, and ask for correction of information input.

231.	04 05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20051] There is no account to display or you do not have the privilege for this operation.	User privilege check	Provide the error text to PSU, and ask for correction of information input.
232.	04 05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20049] The selected account is not an "Account Permitted" for inquiry or has been deleted.	User privilege check (Account balance transaction inquiry privilege check)	Provide the error text to PSU, and ask for correction of information input.
233.	04	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20052] There is no account to display.	Number of account balances check	Provide the error text to PSU, and ask for correction of information input.
234.	04	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20048] The number of results has exceeded 500 the maximum number of results that can be displayed.	Maximum number of account balances check	Provide the error text to PSU, and ask for correction of information input.
235.	04 05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20054] There is no data to display. Please contact your servicing MUFG Bank office for further assistance.	MT940 serial number check	Provide the error text to PSU, and ask for correction of information input.
236.	04 05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20054] There is no data to display. Please contact your servicing MUFG Bank office for further assistance.	MT942 serial number check	Provide the error text to PSU, and ask for correction of information input.
237.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20061] "dateFrom" must be in YYYY-MM-DD format.	"dateFrom" format check	Provide the error text to PSU, and ask for correction of information input.
238.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20061] "dateTo" must be blank or in YYYY-MM-DD format.	"dateTo" check	Provide the error text to PSU, and ask for correction of information input.

										ation input.
239.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20041] "bookingStatus" in query parameter must be "booked".	"bookingStatus" check	TPP corrects the field setting based on the specifications.
240.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20043] "withBalance" in query parameter must be either "true", "false" or blank.	"withBalance" check	TPP corrects the field setting based on the specifications.
241.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20042] "dateFrom" and "dateTo" in query parameter are in conflict.	Date selection check	Provide the error text to PSU, and ask for correction of information input.
242.	05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E20045] Please specify a date that is within the data retention period.	Date selection available range check	Provide the error text to PSU, and ask for correction of information input.
243.	05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20055] There is no transaction to display.	Number of transactions check	Provide the error text to PSU, and ask for correction of information input.
244.	05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20048] The number of results has exceeded 300, the maximum number of results that can be displayed.	Maximum number of transactions check	Provide the error text to PSU, and ask for correction of information input.
245.	05	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E20059] There is no transaction to display. Please change the criteria and search again.	Number of transactions check (Number of work TBLs check)	Provide the error text to PSU, and ask for correction of information input.
246.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "accounts".	Existence check for accounts of access	Provide the error text to PSU.

247.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10142] "accounts", "balances", "transactions", "availableAccountsWithBalance", and "allPsd2" must not be set when "availableAccounts" is set.	Combination check for availableAccounts of access	Provide the error text to PSU.
248.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10143] "accounts", "balances", "transactions", "availableAccounts", and "allPsd2" must not be set when "availableAccountsWithBalance" is set.	Combination check for availableAccountsWithBalance of access	Provide the error text to PSU.
249.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10144] "accounts", "balances", "transactions", "availableAccounts", and "availableAccountsWithBalance" must not be set when "allPsd2" is set.	Combination check for allPsd2 of access	Provide the error text to PSU.
250.	06 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10145] An IBAN and BBAN cannot be specified at once.	Combination check for iban/bban of access	Provide the error text to PSU.
251.	06 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10146] "currency" must be set when IBAN is set.	Combination check for iban/currency of access	Provide the error text to PSU.
252.	07 17	403	ID of each request	Execution time	(no field)	ERROR	RESOURCE_UNK OWN	[E10138] There is no valid consent data.	Consent validity information existence check	Provide the error text to PSU, and ask for correction of information input.
253.	07	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E10126] You do not have the privilege	User privilege check	Provide the error text to PSU.

	17		h request	time				ilege for this operation.		and ask for correction of information input.
254.	07 17	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E10139] The information set contains accounts outside of Europe.	API availability check for branch	Provide the error text to PSU, and ask for correction of information input.
255.	07 17	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E10136] There is no consent data or consent data has been deleted.	Consent validity information existence check	Provide the error text to PSU, and ask for correction of information input.
256.	08 18	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E10131] Consent information cannot be obtained or account information cannot be obtained.	Consent information obtainment check	Provide the error text to PSU, and ask for correction of information input.
257.	01 06 12 15 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "Content-Type".	Content-Type existence check	TPP corrects the field setting based on the specifications.
258.	01 06 12 15 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "application/json" in "Content-Type".	Fixed value check for Content-Type	TPP corrects the field setting based on the specifications.
259.	01 06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "requestId".	requestId existence check	Provide the error text to PSU.

	12 15 16									
260.	01 06 12 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "GCMSPlusCustomerId".	GCMSPlusCustomerId existence check	Provide the error text to PSU.
261.	01 06 12 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "GCMSPlusUserId".	GCMSPlusUserId existence check	Provide the error text to PSU.
262.	01 06 12 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "COMSUITECustomerId".	COMSUITECustomerId existence check	Provide the error text to PSU.
263.	01 06 12 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "COMSUITEUserId".	COMSUITEUserId existence check	Provide the error text to PSU.
264.	01 12	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "CSID".	CSID existence check	Provide the error text to PSU.
265.	01 ~	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "X-Request-ID".	X-Request-ID existence check	TPP corrects the field setting based on the specifications.

	08 12 13 15 ~ 18									
266.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E50028] "X-Request-ID" must be in the following format of 8-4-4-4-12 alphanumeric characters (X represents a character):XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX	X-Request-ID format check	TPP corrects the field setting based on the specifications.
267.	01 06 12 15 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "requestId".	requestId existence check	TPP corrects the field setting based on the specifications.
268.	03 04 05	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "Consent-ID".	Consent-ID existence check	TPP corrects the field setting based on the specifications.
269.	01	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set	PSU-IP-Address existence check	TPP corrects the field setting

	~ 08 12 13 15 ~ 18		request	time				"PSU-IP-Address".		based on the specifications.
270.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-IP-Port".	PSU-IP-Port existence check	TPP corrects the field setting based on the specifications.
271.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Accept".	PSU-Accept existence check	TPP corrects the field setting based on the specifications.

272.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Accept-Charset".	PSU-Accept-Charset existence check	TPP corrects the field setting based on the specifications.
273.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Accept-Encoding".	PSU-Accept-Encoding existence check	TPP corrects the field setting based on the specifications.
274.	01 ~ 08 12 13 15 ~	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Accept-Language".	PSU-Accept-Language existence check	TPP corrects the field setting based on the specifications.

	18									
275.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-User-Agent".	PSU-User-Agent existence check	TPP corrects the field setting based on the specifications.
276.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Http-Method".	PSU-User-Agent existence check	TPP corrects the field setting based on the specifications.
277.	01 ~ 08 12 13 15	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Device-ID".	PSU-Device-ID existence check	TPP corrects the field setting based on the specifications.

	~ 18									
278.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "PSU-Geo-Location".	PSU-Geo-Location existence check	TPP corrects the field setting based on the specifications.
279.	01 ~ 08 12 13 15 ~ 18	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "Client-Id".	Client-Id existence check	TPP corrects the field setting b ased on the specifications.
280.	01 06 12 16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "requestId".	requestId existence check	TPP corrects the field setting b ased on the specifications.
281.	06	400	ID of each	Execution	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "ConsentOkNg".	ConsentOkNg existence check	TPP corrects the field setting b

			request	time						ased on the specifications.
282.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "resource-owner".	resource-owner existence check	TPP corrects the field setting based on the specifications.
283.	06	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10081] Please set "access-token".	access-token existence check	TPP corrects the field setting based on the specifications.
284.	09	400	ID of each request	Execution time	(no field)	ERROR	SERVICE_INVALID	[E19023] Please contact your servicing MUFG Bank office for further assistance.	requestId check.	TPP corrects the field setting based on the specifications.
285.	16	400	ID of each request	Execution time	(no field)	ERROR	FORMAT_ERROR	[E10147] Please set IBAN or BBAN.	Combination check for iban/bban of account	Provide the error text to PSU.

*Relationship between each code value and target API is as follows.

01: POST_/v1/payments/{payment-product}

02: GET_/v1/payments/{payment-product}/{paymentId}/status

03: GET_/v1/accounts

04: GET_/v1/accounts/{account-id}/balances

05: GET_/v1/accounts/{account-id}/transactions

06: POST_/v1/consents

07: GET_/v1/consents/{consentId}

08: DELETE_/v1/consents/{consentId}

09: GET_/authorize

10: POST_/token

11: Errors occurred with POST payments, and returned with GET payments

11-1: Payments, Foreign Remittance

- 11-2: SEPA Credit Transfer
- 11-3: Domestic Credit Transfer (Europe)
- 11-4: UK Low Value Payment
- 11-5: Payments(iso-20022), Foreign Remittance(iso-20022)
- 12: POST_/v1/bulk-payments/{payment-product}
- 13: GET_/v1/bulk-payments/{payment-product}/{paymentId}/status
- 14: Errors occurred with POST bulk-payments, and returned with GET bulk-payments
 - 14-1 : SEPA Credit Transfer
 - 14-2 : Domestic Credit Transfer (Europe)
 - 14-3 : UK Low Value Payment
- 15: POST_/v1/ funds-confirmations
- 16: POST_/v2/consents/confirmation-of-funds
